

AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions and listings of claims in the application.

LISTING OF CLAIMS

1. (currently amended) An anisotropic conductive adhesive agent,
comprising:
 - a first adhesive layer; and
 - a second adhesive layer wherein the first adhesive layer and the second adhesive layer are formed of the same material;wherein:
 - the first adhesive layer includes a plurality of electrically conductive particles; and
 - the second adhesive layer is laminated onto the first adhesive layer;
 - the second adhesive layer is thicker than the first adhesive layer;and
 - a particle diameter of the electrically conductive particles is smaller than a thickness of the first adhesive layer.
2. (canceled)

3. (currently amended) The anisotropic conductive adhesive agent according to claim 1, wherein the material of both the first adhesive layer and the second adhesive layer ~~are comprised of~~ is an insulating adhesive agent.

4. (original) The anisotropic conductive adhesive agent according to claim 1, wherein the particle diameter of the electrically conductive particles is smaller than $\frac{1}{2}$ of the thickness of the first adhesive layer.

5. (currently amended) The anisotropic conductive adhesive agent according to claim 1, wherein the plurality of electrically conductive particles are unevenly distributed ~~on a surface of~~ within the first adhesive layer and adjacent to an interface of the first and second adhesive layers.

6. (new) An anisotropic conductive adhesive agent, comprising:
a first adhesive layer including a plurality of electrically conductive particles fixed therein and adjacent a lamination surface of the first adhesive layer; and
a second adhesive layer laminated onto the lamination surface of the first adhesive layer, the second adhesive layer being thicker than the first adhesive layer;
wherein a particle diameter of the electrically conductive particles is smaller than a thickness of the first adhesive layer and the conductive particles are aligned at a terminal connection position within the conductive adhesive agent.

7. (new) An anisotropic conductive adhesive agent, comprising:
a first adhesive layer;
a second adhesive layer laminated onto the first adhesive layer and being thicker than the first adhesive layer; and
a plurality of electrically conductive particles included within the first adhesive layer;
wherein a particle diameter of the electrically conductive particles is smaller than a thickness of the first adhesive layer, and the electrically conductive particles are unevenly distributed along a second adhesive layer facing side of the first adhesive layer.
